

Rezzimax is a company focused on pain relief for headaches, TMJ/TMD, sinus congestion and neck pain. Using their proprietary Rezzimax Tuner Pro, the pain points can be targeted and calmed to reduce or eliminate the pain.

CHALLENGE

Situation:

Unfortunately, physical pain is not a stranger to most people. This pain is often caused by migraine, jaw, neck, joint, sinus, TMD/TMJ problems along with anxiety and other symptoms.

The first Rezzimax Tuner was manufactured overseas. While demand was high, the quality of the units was less than hoped and communication barriers made it difficult to improve the tool as desired. Nearly 20% of all incoming units were defective and could not be shipped to customers.

Technical Need:

Based on this poor quality and the desire to perfect their invention, Rezzimax decided it was necessary to redesign and build their next version in the USA.

SOLUTION

Freeform Polymers was Rezzimax's choice for full turn-key design and manufacture. Freeform's design incorporated some of the features of the precedent device and then added more features to make the device more user friendly and desirable. Once designed, prototypes were provided to ensure the design and manufacturing plans were on target. With the plan approved, molds were manufactured for plastic components and internal components were organized and sourced.

The product was then CE tested and registered with the FDA. Complete fulfillment including shipping directly to customer was provided to Rezzimax by Freeform Polymers.

RESULTS

"My wife and I came to Freeform Polymers 8 months ago with a dream to be able to create our invention here in the United States. In every interaction with the team there, we have felt extremely positive. They have delivered on their promises with an unbelievable turnaround based on our previous experience, assisting in improving our designs and helped us find the assistance we needed to create an amazing, made in America, product. I highly recommend the team at Freeform Polymers"

Sharik Peck, Owner, Rezzimax
